[Try it while reading Moby Dick](#)

About the Reader

[Epub.js](#) library.

Getting Started

Open up [reader/index.html](#) in a browser.

You can change the ePub it opens by passing a link to bookPath in the url:

```
?
bookPath=https://s3.amazonaws.com/epubjs/books/alic
e.epub
```

Running Locally

Install [node.js](#)

Then install the project dependences with npm

```
npm install
```

You can run the reader locally with the command

```
node start
```

Builds are concatenated and minified using [gruntjs](#)

To generate a new build run

```
grunt
```

Or, to generate builds as you make changes run

```
grunt watch
```
